To whom it may concern:

I have heard about the Asian Carp problem and I think that you should catch all of them kind of like a huge net and scoop them all up when there is a whole group of them. Or, what I really think is that you get some type of machinery and electrocute them all, like an electrocuting net. I know the Coast Guar will do anything to stop the Asian Carp from terrorizing the Great Lakes. So I'm going to give one more Idea: Put a Blockade so the fish wont get to the Lakes, then deal with them. Overall I think you guys are doing a good thing.

Sincerely,

Mikhail.
