Carp has a stigma of a undesirable fish of consumption. I have read many uses for them on the internet. One use I have not come across is giving them to farmers for fertilizer. Freeze them until burial in the fields to avoid degradation. This would save farmers money for fertilizers and no worry of toxin runoff of chemicals into the waterways. Human waste from septic tanks is applied to fields why not useless fish. My dad shot carp with a bow and buried them in the garden and the plants did great. I really do like the idea of exporting them overseas to bring in money to the USA. This is a resource to other countries. Another idea is increasing the population of the northern pike to gobble up the fry of these carp. I had found Gobi's inside pike I have caught
