I have reviewed the ANS Control Paper concerning the Chicago Area Waterway System. I have strong concerns about the most effective method of preventing the Asian Carp from invading the Great Lakes Basin. My review of the Control Paper and the fact sheets for all 39 proposals leads me to the conclusion that the best control method under consideration by the Corps is the construction of the hydrologic separation of the Great Lakes Basin from the Mississippi River Basin. After construction of the barrier continued monitoring of the barrier system must be part of the overall prevention system. Thank you.
