Summary of the GLMRIS Report

Great Lakes and **Mississippi River Interbasin Study**

GLMRIS GREAT LAKES AND MISSISSIPPI RIVER INTERBASIN STUDY	STRA	UG Army C of Enginee
--	------	-------------------------

COMMENT REGISTRATION FORM

Please complete this registration form if you would like to speak at a GLMRIS Report Public Meeting or submit a comment in writing. Oral comments will be limited to 3 minutes per person and will be documented by a professional stenographer. To submit written comments or other uments, please attach them to this form and return them to the welcome desk.

> You must submit your first name, last name and zip code Any other information is optional

on: Before including your address, phone number, e-mail in with your comment, you should be aware that your entire formation, will be posted on the GLMRIS website. If you nal information from public view from the GLMRIS website, owever, information withheld from the website will be sts for disclosure of information collected will be handled n Act. Comments and information, including the identity of roduced, and distributed. Submissions should not include eks to preserve as confidential. Please note, all usinesses, and from individuals identifying themselves as ations or businesses, will be available for public inspection

tion on the website nation from the website

ECOSYSTEMS

RECREATION

WATER USE

Scope of Study

- Interbasin transfer of ANS via aquatic pathways
- Range of options and technologies
- Study Goals
 - Prevent ANS transfer
 - Mitigate adverse impacts to waterway uses
- Stakeholder engagement
- July 2012 Legislation
 - Expedited completion of report to 18-mo timeline
 - Focused efforts on CAWS
 - Evaluate hydrologic separation

Ohio

Great Lakes Basis

BUILDING STRONG®

LEGEND

OK

About the CAWS

- Complex, multi-use waterway
 - Navigation
 - Cargo
 - Commercial passenger and governmental (Fire, Police, etc)
 - Recreational
 - Water Supply & Conveyance
 - Municipal wastewater
 - Industrial users
 - Flood Risk Management
 - Stormwater
 - Combined sewer overflow (CSO)
 - Recreation
- Primary connection between basins

BUILDING STRONG®

Contents of the GLMRIS Report

- GLMRIS Report presents information on a range of alternatives
 - Conceptual design of alternatives
 - General mitigation requirements of alternatives
 - Range of cost estimates corresponding to design detail
- Alternative comparison tool to support decision-making
 - Evaluation criteria are presented in GLMRIS Report
 - GLMRIS Report does not include ranking or rating of plans
- Additional analyses required prior to implementation
- Plan formulation
 - Identify connections
 - Evaluate species
 - Assess available controls
 - GLMRIS Report describes eight alternatives

ANS Control Technologies

GLMRIS Lock

Screened Flow Gates

 Address modes of ANS movement

- Swimming
- ► Floating
- Hitchhiking

Physical Barrier

BUILDING STRONG®

Baseline Alternative – Sustained Activities

- No new federal action as a result of GLMRIS
- Continuing current efforts supported by federal and state agencies
 - Ruffe, snakehead, sea lamprey, etc
- Asian carp activities include
 - USACE operation of the electric barriers
 - Local, State and Federal activities
 - GLRI Program support for ANS-related activities;
 - Interagency Monitoring & Response: telemetry, electrofishing/netting, eDNA and response actions;
 - Population control (fish harvesting); and,
 - Research & implementation of Asian carp controls;

Nonstructural Control Technologies Alternative

- ANS Controls that do not require construction of structures and may be implemented quickly
- Examples
 - Active management
 - Monitoring
 - Chemical controls
 - Education and outreach
 - Public awareness campaigns
 - Self-imposed cleaning of watercraft
 - Laws and regulations
 - Inspection and enforcement
 - Bilge and ballast water management
- Successful implementation is a shared responsibility
- Nonstructural controls are effective best management practices to complement other Alternative Plans

Estimated Time to Completion: **0 yr**

Estimated Cost: **\$68M** (Annually)

Flow Bypass Alternative

Overview

- ► Single, two-way control points
- Volume of waterways diverted through an ANS treatment facility
- GLMRIS Lock feature
- Maintains existing CAWS flow regime
- Mitigation
 - Flood risk (Significant)
 - Reservoirs
 - Conveyance tunnels and infrastructure

Estimated

Estimated Time to Completion: 25 yr

CAWS Buffer Zone Alternative

Overview

- Multiple one-way control points for ANS
- Operate CAWS as ANS-controlled zone
 - Facilitates monitoring and response
- Preserves majority of CAWS flow regime
- Adaptive Management: Opportunity for phased implementation
- Mitigation
 - Flood risk
 - Reservoirs
 - Conveyance tunnels
 and infrastructure

Estimated

Cost: \$7.8B

Estimated Time to Completion: **10 yr**

Lakefront Hydrologic Separation

Overview

- Four barrier locations
- Risk reduction is not achieved until all barriers are complete
- Mitigation measures control completion schedule of barriers
- Mitigation
 - ► Flood risk (Significant)
 - Tunnels & Reservoirs
 - Water quality
 - ANS treatment for water flow/quality
 - Navigation
 - Recreational boat storage

Estimated Time to Estimated Completion: 25 yr Cost: \$18.4B

Alternative Plan 5

Mid-System Hydrologic Separation

Overview

- Two barrier locations
- Risk reduction is not achieved until all barriers are complete
- Mitigation measures control completion schedule of barriers
- Mitigation
 - Water quality (Significant)
 - CSO capture
 - Re-route water reclamation plant (WRP) effluent
 - Sediment remediation

Hybrid – Cal-Sag Open

Overview

- Combines technology and barrier features
- Minimize impacts to uses/users
- Adaptive Management: Opportunity for phased implementation
- Mitigation
 - Water quality (Significant)
 - CSO capture
 - Re-route WRP effluent
 - Sediment remediation
 - Flood risk mitigation
 - Reservoirs
 - Conveyance tunnels, infra.

Estimated Time to Completion: 25 yr

Cost: \$15.1B

Estimated

Hybrid – CSSC Open

Overview

- Combines technology and barrier features
- Minimize impacts to uses/users
- Adaptive Management: Opportunity for phased implementation
- Mitigation
 - Water quality (Significant)
 - CSO capture
 - Re-route WRP effluent
 - Sediment remediation
 - Flood risk mitigation
 - Reservoirs
 - Conveyance tunnels, infra.

Estimated

Cost: **\$8.3B**

Estimated Time to

Completion: 25 yr

Evaluation Criteria

- Effectiveness at Preventing Interbasin Transfer
- Environmental Impacts
 - Direct
 - Indirect
 - CAWS
 - Lake Michigan
 - Mitigation Costs
- Economic Impacts
 - Flood Risk
 - Navigation
 - Mitigation Costs
- Complexity of Regulatory Compliance

- Costs
 - ► Alternative
 - Annual O&M
- Duration for Implementation
- Unmitigated Impacts

Additional Considerations

- Mitigation Significant factor in required investments and timing of alternative implementation
 - Flood risk management
 - Water quality
- Residual risks
 - Means of ANS transfer outside of the aquatic pathway
 - Duration for implementation vs. ANS transfer risk
 - Effectiveness of controls
- Adaptive management
 - Does the ANS control measure work as intended?
 - How simple is it to change, reverse, or adapt the measure to function more effectively?
- ANS control is a shared responsibility
 - Implementation of any plan to further control ANS transfer would likely require significant investment of resources in order to achieve a joint solution.
 - Continued engagement by stakeholders is essential to reach a decision toward a collaborative path forward

Next Steps

- Public Rollout
 - Communicate contents of the GLMRIS Report to broad regional, national audience
 - Final report, supporting info on website http://glmris.anl.gov
 - Comment period through: March 31, 2014
 - Submit comments on GLMRIS Alternatives at public meetings; online via new GLMRIS website; via mail/delivery
 - 'On demand' engagement by request
- Stakeholder engagement
 - Feedback from public, local stakeholders, regulatory agencies, and waterway owner/operators
 - Provide information to decision-makers on alternatives for future action

GLMRIS MISSISSIPPI RIVER INTERBASIN STUD Other Pathways Documents Stav Involved FAQ About the Study News Events

Stay Involved

This Web site is the online center for public information and involvement in the Great Lakes and Mississippi River Interbasin Study (GLMRIS). Browse this Web site, and subscribe to receive email alerts and GLMRIS newsletters. You can also attend public forums to be hosted by USACE. Forum details such as date, time, and location will be announced on this Web site, to GLMRIS email subscribers, and through social media outlets.

The GLMRIS Team is utilizing Facebook and Twitter as a means of broadcasting ways to stay involved with GLMRIS and with issues associated with aquatic nuisance species. Join the GLMRIS conversation on Facebook and Twitter.

Past Involvement Opportunities

Focus Area 2 Other Aquatic Pathways Comment Period

Interim reports for 18 potential aquatic pathways, as well as a summary report, were released beginning September 14, 2012. The GLMRIS FA2 Team asked for public input on these reports. Each report had a 30-day comment period following its release. Read the reports with incorporated feedback on the FA2 Documents page.

ANS Control Screening Comment Period

USACE has screened the ANS Controls identified in the Inventory of Available Controls for Aquatic Nuisance Species of Concern - Chicago Area Waterway System (ANS Control Paper) and removed certain controls from further consideration by GLMRIS. USACE requested comments from public stakeholders regarding the ANS Controls Screening from January 18 through February 21, 2013. USACE considered the information generated during the comment period to further screen the list of ANS Controls. More information on the screening can be found on the ANS Control Screening page
