The invasion of Asian Carp into our Great lakes system will greatly alter the natural balance and have adverse effects on the native fish populations. My belief is that we should make every effort to stop this from happening and a physical barrier separating the two watersheds seems to be the best and most effective method. These two watersheds were not connected naturally to begin with and because of human manipulation we have caused this potentially irreversible devastation to the largest freshwater system in the world. Lets make the right choice, stop the invasion of Asian Carp into the Great Lakes, invest in physical barriers to eliminate the connection between these two watersheds before it is too late.
