It is paramount that we prevent invasive species from entering the largest freshwater lake system in the world. The idea that the Army Corps of Engineers is only attempting to "reduce the risk" is ridiculous and against the original strategy as authorized by Congress. The various species are not waiting for us to work through government red tape before they attack our water system, they are migrating as we speak. More resources and smart/accountable management of the situation must be swiftly taken so we are not caught unaware. The study in Chicago is a prime example of being "behind the ball" by waiting for a conclusive study to be complete in mid 2015, we've been talking about this situation for years.
