The water level is down for 13 years. My sand beach is mud and tall weeds. The perch are all but gone. The walley are hard to get. the biting insects from the mud beach are terrible. When we moved here 17 years ago there were many many boats perch fishing now they are far and between. All we need now is this carp to finish off the fishery. I do not understand what is the problem with these people fighting this unless as usual it is a money issue. Just how many Great Lakes does the world have? As usual short term concerns are all that is seen. Sad to see this happen. There are more concerns than the carp in the overall scope of the lakes. Now they are allowing the spraying of the weeds on the shore. I refused to have it done and am an out cast in my neighborhood. How much are we going to put in the water before we can not save it? E-coli from Bay City to Singing Bridge now should that not cause some action rather than grant after grant and all is the same.
