The amount of time and money wasted on a study could be better spent on closing the Illinois River Canal. Once there fish get in, there in and there will be no getting rid of them. The impact at this time is unknown. No study can predict the future. But only look to Histoey to show you what other invasive species have done eles where. Closing the river off to the Lake is the only sure way to stop them. Do what is right. Protect our Great Lakes. Sorry Illnois but you knew that someday this issue may return. Read the law governing the reversal of the flow of the Illinois River. Do not let it harm the Great Lakes. Close it. Close it now before it is too late.
