There are significant issues associated with NEPA for GLMRIS. As such, we need to do everything possible to prevent the spread of damaging invasive species like the Asian Carp and environmental damage now.

At risk are significant natural resources such as ecosystems and threatened and endangered species; commercial and recreational fisheries; current recreational uses of the lakes and waterways; ANS effects on water users; effects of potential ANS controls on current waterway uses such as flood risk management, commercial and recreational navigation, recreation, water supply, hydropower and conveyance of effluent from wastewater treatment plants and other industries; and statutory and legal responsibilities relative to the lakes and waterways.

Again, we need to do everything possible to prevent the spread of damaging invasive species like the Asian Carp and any further environmental damage now. Please refine GLMRIS to focus on these issues, and eliminate issues that are not significant from further detailed study.
