The Corps of Engineers created this problem by building canals for foreign vessels to enter the Great Lakes and in the Chicago shipping canal case drain water from Lake Michigan to the Mississippi River to enhance shipping interests. These canals must be blocked and restored to their natural state. The shipping locks entering the Great Lakes should be demolished.

The gain to business by the US operation of these canals and locks is far exceeded by the cost in environmental damage from invasive species and loss of native aquatic species. The millions of dollars gained by a few corporations cost the taxpayers of this country billions of dollars in controlling harmful invasive species.

That's what the Corps of Engineers does, screws up the environment for a few special interests!
