I'm starting to wonder if any of the "biologist" conducting this study actually have a degree in this field! It is obvious that stories are changing and any studies that contradict what you are pushing are being ignored. Is it a political thing? Here's my suggestion...let's put our environment first and save our lakes. You have been so busy trying to manually control our lakes that you have made it worse with all the invasive species and you've been overpowering our native species. Let's restore our native fish predators and let get our lake back to a healthy status. If you can't understand this then as a "public servant" you should really step back and let a real biologist take over and save our lakes.
