I am a business owner that relies on a healthy Lake Michigan and Fishery. I am also a concerned citizen of Michigan. I believe that we MUST pursue full prevention. All the risks that exist now, and in the future have not even been identified. The only reasonable approach to keeping the Great Lakes healthy and viable is to fully prevent invasive species. The only method that is sure to do that is hydrologic separation-- restoring flow to the way it naturally was. It seems to me that the Corps should now put efforts and funding into researching HOW to implement hydrological separation since it is now been shown to be the only long term, real solution.
