GLMRIS will explore options and technologies, collectively known as aquatic nuisance species (ANS) controls, that could be applied to prevent ANS transfer between the basins through aquatic pathways. Using input obtained during the scoping period, USACE will refine GLMRIS to focus on significant issues, as well as eliminate issues that are not significant from further detailed study. Use the following space to comment on issues that you consider significant or not significant to GLMRIS. Prepared Documents can also be attached to this form.
