We have to Asian Carp from invading the Great Lakes water system now. I don't need to lecture you on the importance of stopping this invasive species NOW...you folks know the importance of this. By waiting until 2015 to review the completion of the Corps Study to act, you will have already failed in preventing this species from invading the Great Lakes. This will be an economical disaster for our region and for me personally. This Asian Carp species will destroy native species habitat and species that we have introduced for sport fisheries. I am personally a part time fishing professional that guides fisherman on several trout and salmon species in the region. The impact of this invasive species on sport fishing alone will be devastating and could potentially cost the region billions of dollars. When this is combined with the impact on the commercial fishing industry the impact will be further reaching and more costly to the region than the 2012 Gulf Oil Spill. Please do not wait to address and fix this problem. It will be an environmental and economic problem that we cannot afford to fix later!
