dear kind people,

we write in support of your efforts to split the great lakes watershed from the mississippi basin as soon as possible. according to the eDNA data from notre dame, the asian carp are alrerady getting into lake michigan at chicago. they need to be stopped immediately before they can build up in sufficient numbers to form sustainable breeding populations at which point the great lakes are doomed to ecological decay on a scale unimaginable. the locks at chicago must be closed and the other tributaries in the area returned to their original watersheds. if we continue to do nothing as global warming continues its inexorable move northward, the great lakes will succumb to this invasion in a single generation.
