This idea may seem simplistic in its approach but I honestly feel it would work. Rather than spend millions of dollars on meetings and technological ways of stopping the asian carp, why not call on the resources of who knows the most about fish....Fishermen! Simply make it financial profitable for fishermen to catch and turn in the asian carp. CAN you imagine 1,000 fishermen catching 50 of these in a week and recieving compensation for it? Can you imagine 50,000 less asian carp being eliminated in one week? Even if you gave the fishermen \$10 per fish that is only \$500,000.

A simple, effective and common sense. approach
