There needs to be a much larger effort to eliminate as many Asian Carp as possible from the entire system. The carp would provide a huge free source of food for rearing brood stocks across the nation. There has to be a way to get fisher persons to target them on mass. Bounties, drawings for prizes, free licenses, something to encourage and reward those that go out and kill them in mass.

As for them getting into the Great Lakes, set up high voltage shock grids that activate upon detection of fish of a certain size or number or have observers monitor the gates and shock and kill the carp if they try to get past current preventative measures. If there is something specific that can deter the carp directly it needs to be found and put in place so they never get into the Great Lakes.
