I believe that Asian carp are an imminent threat to the continued health of the Great Lakes which demands action on an 18-month time frame.

I also believe that any proposed solution which falls short of full hydrologic separation would be an ineffective half-measure.

Asian carp threaten Michigan's tourism and fishing industries and could cause billions of dollars of damage. You need to fix this, and fix it before it can't be fixed. How long is that? No one knows. Therefore the shortest possible time should be expended before a solution is implemented. Remember too that study can always be continued as solutions are being implemented.
