The prevention of invasive species like the Asian Carp needs to be done as quickly as possible. People are getting injured by the fish jumping out of the water.

But most importantly is the Asian Carp will destroy the natural environment.

They have already made their way from the Mississippi River into Illinois River.

They maybe a good export product. But they should do not need to be allowed into the Great Lakes to destroy the fish and other water life that live there.

Some southern areas are over run by another "imported" product, that vineing weed that is growing and covering everything. We don't need an import to destroy wildlife.
