'Hydroloical separation between the Great Lakes and the Mississippi River drainage basin is the only real solution and it is easy to achieve. The added costs to the recreational boaters is just another cost the users have to bear in their pursuit of cheap recreation on the waterways of this nation. The solution for the industrial shippers is transfer handling stations to have two separater fleets, one on the Great Lakes and one on the Mississippi/CSSC/canal system. They already have the equipment, knowledge and additional need for capacity will add jobs and require no additional procedures or policies.
