Adequate time has been spent studying the invasive fish issue. It is time to take aggressive action to stop the carp and other destructive species from invading the Great Lakes.

Once infiltrated, as past experience has shown, the damage can be irreversibile. The Army Corps of Engineers must divert the water back as it originally flowed, and in the meantime "turn up the voltage" to prevent small fish from entering the Great Lakes.

Past experience has sadly shown the irreversible outcome of not being proactive in a timely manner.

It's decision time for the Army Corps of Engineers. They've certainly had enough time to tackle the problem.
