I am writing to urge the Corps of Engineers to complete its study this year and produce a recommended plan for keeping Asian carp out of the Great Lakes ecosystem. The situation is URGENT! Carp DNA has been found in Lake Michigan. Carp themselves have been found very close to Chicago. The Great Lakes and Mississippi River system must be completely separated and immediately if are to save the great great Great Lakes ecosystem, including the magnificent St. Lawrence River, where I live. No other option will protect the Great Lakes ecosystem. Speed is of the essence. At its present pace the Corps study will be way to late to protect this great body of water.
