KEEP THEM OUT OF THE GREAT LAKES!

Aquatic nuisance species (ANS) are nonindigenous species that threaten the diversity or abundance of native species or the ecological stability of infested waters, or commercial, agricultural, aquacultural or recreational activities dependent on such waters.

I have observed first hand the degradation, problems and changes to the Great Lakes ecosystem that were caused by the quagga and zebra mussels and the round goby. New non-indigenous species must be kept out, including the Asian carp and other related species. Areas around the Great Lakes will have their ecosystems changed forever. Please take the appropriate measures to keep these fish and other (ANS) species that will harm the Great Lakes OUT. Thank you.
